

**IN THE SPECIFICATION:**

*Please amend the paragraph beginning at page 2, line 13 and ending at page 2, line 20, as follows:*

Accordingly, which part of the character information should be vocalized is always decided by the broadcasting party. In other words, the broadcast receiving party's intention is not concerned. Further, the character information accompanied with and without the voice information is broadcast intermixed ~~mixedly broadcasted~~ since the vocalization instructions are given by appending the vocalizing command to the character information. This makes the data-receiving device have a complicated structure.

*Please amend the paragraph beginning at page 4, line 24 and ending at page 5, line 1, as follows:*

A reception part 12 is a circuit that performs all processing required to accurately reproduce the received data<sub>1</sub> such as a de-interleaving [[deinterleaving]] process to be made on the detected and demodulated data<sub>1</sub> and error correction process. The reception part 12 also decodes the received data for respective channels.

*Please amend the paragraph beginning at page 20, line 8 and ending at page 20, line 12, as follows:*

In the operation mode 4, the vocalization of the received character information is executed at Step 430. The system controller 13 considers the setting/resetting conditions of the respective flags and the logic conditions of the flags entered by the user beforehand to decide the manner ~~maner~~ of vocalization.
